

Simple and sustainable

— EPOPACK storytelling packaging —

Introducing : PET Airless bottle

epopack.com

Introduction

Simplicity is not easy,
it's a process to self-refinement.

We believe

We believe what customers need is not just a container, it is a story-teller. Packaging should be able to speak for itself. It can be eco-friendly and luxurious at the same time.

We breakthrough

A wake up call from a volunteer experience in a recycling station transformed us to be a better company. Focusing on eco-friendly material and designing products with an earth caring mindset.

We serve

Helping customers to present their brand stories, to stand out from other competitors and to choose the right material and show the respect to the earth.

EPOPACK - 3 main unique features

Eco-friendly PET

PET is recyclable material which is with international recycle code number 1. PET material also has excellent chemical and physical resistant which can contain most of the cosmetic products.

Heavy wall style

Heavy wall style crates a richness feeling which make cosmetic products stand out. With PET's high clarity, it looks just like a glass bottle but shatterproof.

Up-Spring system

To protect the formula's purity, all the pumps or sprayers we use are all in up-spring system, which is mean the metal spring inside the pump or sprayer would not directly contact with the formula.
